Java 9 modularity is the ultimate guide to the Java module system. why modules? module system was a blessing jdk itself. some gigantic monolithic codebase, now neatly modzed into recognizable components: modularizing jdk makes it proof of the future. Through strong encapsulation in modules, internal packages can certainly remain private, resulting in the evolution of the internal code, as was envisaged from the beginning. against the strong limits of the module, it was too easy to accidentally rely on non-public apis. Clear dependencies ensure that there is backsliding into the big ball of dirt. the nice thing is, with Java 9 you can use the same module system used to modularize jdk to modularize your applications. translate these boxes and arrows on your board into actual Java modules, with module boundaries and dependencies executed in Java compiler and runtime. in the book, we approach both the new development of java 9 as well as the migration scenario. but i will not use modules (soon) modules are optional java 9. you can keep running programs classpath, or you can choose to create a modular program. However, applications for classpath still have to work on modularized jdk. this brings new challenges when migrating java 9. especially when the program uses libraries that poke the JDK internally (and there are many of them), you need to know how to deal with these situations. The book includes all the scenarios that need to be managed when transferring existing code bases to Java 9. library authors, it is even more important to support Java 9 as soon as possible. a special section on library migration. Book event javaone if you are javaone this year, be sure to stop at one of our talks as well: designing modularity with Java 9 (con2606) modules or microservices (con1450) migrates to Java 9 modules (con1455) in addition to these technical sessions, we will also be doing a book signing session in the o'reilly booth on Wednesday afternoon, October 5. this will be the first time we have a print version in our hands as well, so it will be special. i hope to see a lot of people out there!
